

Question 1: Discuss the relationship-based approach for high-potential clients.

Question 2: Explain money laundering?

Question 3: From a consumer's point of view, why high interest rate spread and variable interest rate are important issues in consumer financing.

Question 4: How can you manipulate the address of a file (resource) accessible on the Internet?

Answer:

World wide web, URL, domain name

Question 5: How can you open a link in a new browser window?

Question 6: If, within a class, da is a member variable, will the statement `this.da=25;` assign 25 to da?

Answer:

No because "this" is pointer, so using pointer to object we use the `->` operator to access object member function and data member,

Question 7: What are Accessor Functions, Explain with an example?

Answer:

Accessor functions are used to access private data of the object, we provide accessor functions to get and set private data members of the class.

Example

```
class Student{
...
int rollNo;
public:
void setRollNo(int aRollNo){
rollNo = aRollNo;
}
};
Avoiding Error
void Student::setRollNo(int aRollNo){
if(aRollNo < 0){
rollNo = 0;
}(Page93)
```

Question 8: What are binary operators. Give an example of binary operators overloading using any class.

Answer:

Binary Operators Overloading

Binary operators act on two quantities.

Examples of binary operators:
